

Python [conda env:DataScience]

Web Scraping with Python - World Population - Worldometer

Scrape: World Population: Worldometer

- Necessary packages and libraries:

```
In [1]: from bs4 import BeautifulSoup
import requests
import pandas as pd
from io import StringIO
from IPython.display import display, HTML

# Disable warnings
import warnings
warnings.filterwarnings('ignore')

print('All packages imported!')
```

All packages imported!

- Extracting data from HTML tables into a DataFrame using BeautifulSoup and Pandas

World Population (2024 and historical)

- Download the content of the website

```
In [2]: # The below url contains html tables with data about world population.
url = "https://www.worldometers.info/world-population/"
```

- Get the content of the web page in text format and store it in the variable: data

```
In [3]: # Get the contents of the webpage in text format and store in a variable
data = requests.get(url).text
```

- Ceate a soup object using the BeautifulSoup class

```
In [4]: soup = BeautifulSoup(data, "html.parser")
```

```
In [5]: print(soup.prettify())
```

```

            <!-- timeline text -->
            <p>
              The chart above illustrates how world population has changed throu
ghout history.
              <a href="/world-population/world-population-by-year/">
                View the full tabulated data.
              </a>
            </p>
            <p>
              At the dawn of agriculture, about 8000 B.C., the population of the
world was approximately 5 million. Over the 8,000-year period up to 1 A.D.
it grew to 200 million (some estimate 300 million or even 600, suggesting
how imprecise population estimates of early historical periods can be), wi
th a growth rate of under 0.05% per year.
            </p>
            <p>
              A tremendous change occurred with the industrial revolution: where
as
              <strong>
                it had taken all of human history until around 1800 for world pop
ulation to reach one billion
              </strong>
              , the second billion was achieved in only 130 years (1930), the th
ird billion in 30 years (1960), the fourth billion in 15 years (1974), and
the fifth billion in only 13 years (1987).
            </p>
            <ul>
              <li>

```

During the 20th century alone, the population in the world has grown from 1.65 billion to 6 billion.

In 1970, there were roughly half as many people in the world as there are now.

Because of declining

growth rates

, it will now take over 200 years to double again.

<p>

Wonder how big was the world's population when you were born?

<h2>

Growth Rate

</h2>

<div align="right">

```

        back to top ↑
    </a>
</div>
<div class="chart-header">
    Yearly Population Growth Rate (%)
</div>
<div>
    <div id="chart_pop_rate" style="height:500px; margin:0; padding:0"
>
        </div>
    </div>
    <p>
        Population in the world is growing at a rate of around
        <strong>
            0.87%
        </strong>
        per year in 2024 (up from 0.88% in 2023, and down from 0.97% in 20
20, and 1.05% in 2019). The current population increase is estimated at ar
ound
        <strong>
            71 million people per year
        </strong>
        .
    </p>
    <p>
        Annual growth rate reached its peak in the mid 1960s, when it was
at around 2%. The rate of increase has nearly halved since then, and will
continue to decline in the coming years.
    <p>
        World population will therefore continue to grow in the 21st cent
ury, but at a
        <strong>
            much slower rate compared to the recent past
        </strong>
        . World population has doubled (100% increase) in 40 years from 1
959 (3 billion) to 1999 (6 billion). It is now estimated that it will incr
ease by 50% in the subsequent 40 years, to reach 9 billion by 2037.
    </p>
    <p>
        The latest
        <a href="/world-population/world-population-projections/">
            world population projections
        </a>
        indicate that world population will reach 10 billion persons in t
he year 2060 and 10.2 billion in 2100.
    </p>

<h2>
    World Population Milestones
</h2>
<div align="right">
    <a class="morelink" href="#">
```

[back to top ↑](#)

10 Billion (2060)

The United Nations projects world population will reach 10 billion in the year 2060.

9 Billion (2037)

World population is expected to reach 9 billion in the year 2037.

8.2 Billion (current)

The current world population is **8,169,762,110** as of Sunday, August 11, 2024 according to the most recent United Nations estimates ^{[[1](#ref-1)]} elaborated by Worldometer. The term "World Population" refers to the human population (the total number of humans currently living) of the world.

8 Billion (2022)

World population has reached **8 billion people in the first half of 2022**, according to the United Nations (after being previously estimated to occur on <https://www.un.org/en/dayof8billion> November 15, 2022). The U.S. Census Bureau <https://www.census.gov/programs-surveys/international-programs/about/idb.html> International Database (IDB) estimates instead that the world population hit 8 billion on Sept

ember 26, 2023. In their note, the U.S. Census Bureau added: "

Emphasis on the word estimates. There are many sources of uncertainty in estimating the global population, and it's unlikely this population milestone was reached on that exact date

" [

source

]

</p>

<h3>

7 Billion (2010)

</h3>

According to the latest revision by the United Nations (released in 2024), world population reached

7 Billion in the first half of 2010

(after being previously estimated as occurring on October 31, 2011). The U.S. Census Bureau made a different estimate, for which the 7 billion mark was

reached on March 12, 2012

.

<h3>

6 Billion (1998)

</h3>

According to the latest revision by the United Nations (released in 2024), the

6 billion figure was reached in the first half of 1998

(this was previously estimated as occurring on October 12, 1999, celebrated as the

Day of 6 Billion

). According to the U.S. Census Bureau instead, the six billion milestone was reached on July 22, 1999, at about 3:49 AM GMT. Yet, according to the U.S. Census Bureau, the date and time of when 6 billion was reached will probably change because the already uncertain estimates are constantly being updated.

World Population by Religion

[back to top ↑](#)

According to a study (based on the 2010 world population of 6.9 billion) by [The Pew Forum](http://www.pewforum.org/global-religious-landscape-unaffiliated.aspx), there are:

- 2,173,180,000 Christians**

```

    </strong>
    (
    <strong>
      31%
    </strong>
    of world population), of which 50% are Catholic, 37% Protestant,
    12% Orthodox, and 1% other.
  </li>
  <li>
    <strong>
      1,598,510,000 Muslims (23%)
    </strong>
    , of which 87-90% are Sunnis, 10-13% Shia.
  </li>
  <li>
    <strong>
      1,126,500,000 No Religion affiliation (16%)
    </strong>
    : atheists, agnostics and people who
    do not identify with any particular religion. One-in-five people (20%) in
    the United States are religiously unaffiliated.
  </li>
  <li>
    <strong>
      1,033,080,000 Hindus (15%)
    </strong>
    , the overwhelming majority (94%) of which live in India.
  </li>
  <li>
    <strong>
      487,540,000 Buddhists (7%)
    </strong>
    , of which half live in China.
  </li>
  <li>
    <strong>
      405,120,000 Folk Religionists (6%)
    </strong>
    : faiths that are closely associated with a particular
    group of people, ethnicity or tribe.
  </li>
  <li>
    <strong>
      58,110,000 Other Religions (1%)
    </strong>
    : Baha'i faith, Taoism,
    Jainism, Shintoism, Sikhism, Tenrikyo, Wicca, Zoroastrianism and many othe
    rs.
  </li>
  <li>
    <strong>
      13,850,000 Jews (0.2%)
    </strong>
    , four-fifths of which live in two countries: United States (4
    1%) and Israel (41%).
  </li>
</ul>

  It was written during the 1970s that 75% of the people who had eve
r been born were alive at that moment. This was false.

```

Assuming that we start counting from about 50,000 B.C., the time when modern Homo sapiens appeared on the earth (and not from 700,000 B.C. when the ancestors of Homo sapiens appeared, or several million years ago when hominids were present), taking into account that all population data are a rough estimate, and assuming a constant growth rate applied to each period up to modern times,
[it has been estimated](http://www.prb.org/Articles/2002/HowManyPeopleHaveEverLivedonEarth.aspx)
that a total of approximately
106 billion people
have been born since the dawn of the human species, making the population currently alive roughly 6% of all people who have ever lived on planet Earth.

Others have estimated the number of human beings who have ever lived to be anywhere from 45 billion to 125 billion, with most estimates falling into the range of
90 to 110 billion
humans.

World Population clock: sources and methodology

[back to top ↑](#)

The world population counter displayed on Worldometer takes into consideration data from two major sources: the
United Nations
and the
U.S. Census Bureau
.

- The
[United Nations Population Division](https://www.un.org/development/desa/pd/)
of the Department of Economic and Social Affairs every two years

calculates, updates, and publishes estimates of total population in its

World Population Prospects

series. These population estimates and projections provide the standard and consistent set of population figures that are used throughout the United Nations system.

The

World Population Prospect: the 2024 Revision

provides the most recent data available (released in July of 2024). Estimates and projected world population and country specific populations are given from 1950 through 2100 and are released every two years. Worldometer, as it is common practice, utilizes the

medium fertility

estimates.

Data underlying the population estimates are national and sub national census data and data on births, deaths, and migrants available from national sources and publications, as well as from questionnaires. For all countries, census and registration data are evaluated and, if necessary, adjusted for incompleteness by the Population Division as part of its preparations of the official United Nations population estimates and projections.

The

International Programs Center

at the U.S. Census Bureau, Population Division also develops estimates and projections based on analysis of available data (based on census, survey, and administrative information) on population, fertility, mortality, and migration for each country or area of the world. According to the U.S. Census Bureau, world population reached 7 billion on March 12, 2012.

.

For most countries adjustment of the data is necessary to correct for errors, omissions, and inconsistencies in the data. Finally, since most recent data for a single country is often two years old on average, the

current world population figure is necessarily a projection of past data based on assumed trends

. As new data become available, assumptions and data are reevaluated and past conclusions and current figures may be modified.

For information about how these estimates and projections are made

de by the U.S. Census Bureau, see the

https://www.census.gov/programs-surveys/international-programs/about/idb.html#par_textimage_1

Population Estimates and Projections Methodology

.

[back to top ↑](#)

The above world population clock is based on the latest estimates released in July of 2024 by the United Nations. It will show the same number wherever you are in the world and whatever time you set on your PC.

Visitors around the world visiting a PC clock based counter, instead, will see different numbers depending on where they are located. This is the case with other world population clocks - such as the one hosted on a United Nations website, reaching 8 billion in 24 different instances (one per hour) on November 15, 2022, when each local time zone reached 12:10:08. Similarly, in 2011, the clocks on a UN website and on National Geographic - showed 7 billion whenever the visitor's locally set PC clocks reached 4:21:10 AM on October 31, 2011.

Obviously, the UN data is based on estimates and can't be 100% accurate, so in all honesty nobody can possibly say with any degree of certainty on which day world population reached 7 billion (or any other exact number), let alone at what time. But once an estimate is made (based on the best data and analysis available), the world population clock should be showing the same number at any given time anywhere around the world.

Extracting the data from the following HTML table into a DataFrame using BeautifulSoup and read_html

World Population Forecast (2025-2050)

Using the same `url`, `data`, `soup`, and `tables` objects as in the last section, I can use the `read_html` function to create a DataFrame.

The table we need is located at `tables[table_count]`

Now I can use the `pandas` function `read_html` and give it the string version of the table, as well as the `flavor` which is the `bs4` parsing engine.

```
In [11]: # The index of the table I'm going to use
table_index = 1
html_table = str(tables[table_index])

table_io = StringIO(html_table)
```

The `read_html` function always returns a list of DataFrames, so we need to choose the one we want from the list.

```
In [12]: world_population_read_html = pd.read_html(table_io, flavor='bs4')[0]

world_population_read_html
```

```
Out[12]:
```

	Year (July 1)	Population	Yearly % Change	Yearly Change	Median Age	Fertility Rate	Density (P/Km²)
0	2025	8231613070	0.86 %	68922356	31	2.24	55
1	2030	8569124911	0.81 %	67502368	32	2.20	58
2	2035	8885210181	0.73 %	63217054	33	2.15	60
3	2040	9177190203	0.65 %	58396004	34	2.13	62
4	2045	9439639668	0.57 %	52489893	35	2.12	63
5	2050	9664378587	0.47 %	44947784	36	2.10	65

• Extract data from HTML tables into a DataFrame using `read_html`

Can also use the `read_html` function to directly get DataFrames from a `url`.

```
In [13]: dataframe_list = pd.read_html(url, flavor='bs4')
```

```
In [14]: len(dataframe_list)
```

```
Out[14]: 5
```

Finally I can select the DataFrame I need from the list.

```
In [15]: dataframe_list[1] # Index on dataframe_list, second table
```

Out[15]:

	Year (July 1)	Population	Yearly % Change	Yearly Change	Median Age	Fertility Rate	Density (P/Km²)
0	2025	8231613070	0.86 %	68922356	31	2.24	55
1	2030	8569124911	0.81 %	67502368	32	2.20	58
2	2035	8885210181	0.73 %	63217054	33	2.15	60
3	2040	9177190203	0.65 %	58396004	34	2.13	62
4	2045	9439639668	0.57 %	52489893	35	2.12	63
5	2050	9664378587	0.47 %	44947784	36	2.10	65

Changelog:

Date (DD/MM/YYYY)	Version	Description of change
03/06/2024	1.0	File creation
04/06/2024	1.1	Add direct extraction with read_html
