

Python [conda env:DataScience]

Web Scraping con Python - Población Mundial - Worldometer

Extraer: Población Mundial: Worldometer

- Importación de los paquetes y bibliotecas necesarios:

```
In [1]: from bs4 import BeautifulSoup
import requests
import pandas as pd
from io import StringIO
from IPython.display import display, HTML

# Deshabilitar advertencias
import warnings
warnings.filterwarnings('ignore')

print('Todos los los paquetes importados!')
```

Todos los los paquetes importados!

- Extracción de los datos de las tablas HTML en un DataFrame usando BeautifulSoup y Pandas

World Population (2024 and historical)

- Descargar el contenido de la página web

```
In [2]: #The below url contains html tables with data about world population.
url = "https://www.worldometers.info/world-population/"
```

- Obtengo el contenido de la página web en formato de texto y lo almaceno en la variable: datos

```
In [3]: # get the contents of the webpage in text format and store in a variable
datos = requests.get(url).text
```

- Creo un objeto soup usando la clase BeautifulSoup

```
In [4]: soup = BeautifulSoup(datos, "html.parser")
```

```
In [5]: print(soup.prettify())
```

```

              </div>
            </div>
            <!-- timeline -->
            <!-- spacer -->
            <div style="margin-top:40px">
              </div>
            <!-- spacer -->
            <!-- timeline text -->
            <p>
              The chart above illustrates how world population has changed throu
ghout history.
              <a href="/world-population/world-population-by-year/">
                View the full tabulated data.
              </a>
            </p>
            <p>
              At the dawn of agriculture, about 8000 B.C., the population of the
world was approximately 5 million. Over the 8,000-year period up to 1 A.D.
it grew to 200 million (some estimate 300 million or even 600, suggesting
how imprecise population estimates of early historical periods can be), wi
th a growth rate of under 0.05% per year.
            </p>
            <p>
              A tremendous change occurred with the industrial revolution: where
as
              <strong>
                it had taken all of human history until around 1800 for world pop
ulation to reach one billion
              </strong>
              , the second billion was achieved in only 130 years (1930), the th
ird billion in 30 years (1960), the fourth billion in 15 years (1974), and
the fifth billion in only 13 years (1987).
            </p>
            <ul>
              <li>

```

During the 20th century alone, the population in the world has grown from 1.65 billion to 6 billion.

In 1970, there were roughly half as many people in the world as there are now.

Because of declining

growth rates

, it will now take over 200 years to double again.

<p>

Wonder how big was the world's population when you were born?

<h2>

Growth Rate

</h2>

<div align="right">

```
        back to top ↑
    </a>
</div>
<div class="chart-header">
    Yearly Population Growth Rate (%)
</div>
<div>
    <div id="chart_pop_rate" style="height:500px; margin:0; padding:0"
>
        </div>
    </div>
    <p>
        Population in the world is growing at a rate of around
        <strong>
            0.91%
        </strong>
        per year in 2024 (up from 0.88% in 2023, and down from 0.98% in 20
20, and 1.06% in 2019). The current population increase is estimated at ar
ound
        <strong>
            73 million people per year
        </strong>
        .
    </p>
    <p>
        Annual growth rate reached its peak in the late 1960s, when it was
at around 2%. The rate of increase has nearly halved since then, and will
continue to decline in the coming years.
    <p>
        World population will therefore continue to grow in the 21st cent
ury, but at a
        <strong>
            much slower rate compared to the recent past
        </strong>
        . World population has doubled (100% increase) in 40 years from 1
959 (3 billion) to 1999 (6 billion). It is now estimated that it will incr
ease by 50% in the subsequent 40 years, to reach 9 billion by 2037.
    </p>
    <p>
        The latest
        <a href="/world-population/world-population-projections/">
            world population projections
        </a>
        indicate that world population will reach 10 billion persons in t
he year 2057 and 10.4 billion in 2100.
    </p>

<h2>
    World Population Milestones
</h2>
<div align="right">
    <a class="morelink" href="#">
```

[back to top ↑](#)

10 Billion (2058)

The United Nations projects world population will reach 10 billion in the year 2058.

9 Billion (2037)

World population is expected to reach 9 billion in the year 2037.

8.1 Billion (current)

The current world population is **8,124,919,773** as of Thursday, August 1, 2024 according to the most recent United Nations estimates ^{[[1](#ref-1)]} elaborated by Worldometer. The term "World Population" refers to the human population (the total number of humans currently living) of the world.

8 Billion (2022)

World population has reached **8 billion people** [on November 15, 2022 according to the United Nations](https://www.un.org/en/dayof8billion). The U.S. Census Bureau [International Database \(IDB\)](https://www.census.gov/programs-surveys/international-programs/about/idb.html) estimates instead that the world population hit 8 billion on September 26, 2023. In their note, they added: "Emphasis on the word estimates. There are many sources of uncertainty in estimating the global population, and it's unlikely this population milestone was reached on that exact date"

" [

 source

]
</p>
<h3>
 7 Billion (2010)
</h3>
 According to the latest revision by the United Nations (released in 2022), world population reached

 7 Billion in late 2010

 (after being previously estimated as occurring on October 31, 2011). The U.S. Census Bureau made a different estimate, for which the 7 billion mark was

 reached on March 12, 2012

 .
<h3>
 6 Billion (1998)
</h3>
 According to the latest revision by the United Nations (released in 2022), the

 6 billion figure was reached towards the end of 1998

 (this was previously estimated as occurring on October 12, 1999, celebrated as the

 Day of 6 Billion

). According to the U.S. Census Bureau instead, the six billion milestone was reached on July 22, 1999, at about 3:49 AM GMT. Yet, according to the U.S. Census Bureau, the date and time of when 6 billion was reached will probably change because the already uncertain estimates are constantly being updated.

  </a>
</div>
<p>
  According to a recent study (based on the 2010 world population o
f 6.9 billion) by
  <a href="http://www.pewforum.org/global-religious-landscape-unaff
iliated.aspx" target="_blank">
    The Pew Forum
  </a>
  , there are:
</p>
<ul>
<li>
  <strong>
    2,173,180,000 Christians
  </strong>
  (
  <strong>
    31%
  </strong>

```

of world population), of which 50% are Catholic, 37% Protestant, 12% Orthodox, and 1% other.

-

 1,598,510,000 Muslims (23%)

 , of which 87-90% are Sunnis, 10-13% Shia.

 1,126,500,000 No Religion affiliation (16%)

 : atheists, agnostics and people who do not identify with any particular religion. One-in-five people (20%) in the United States are religiously unaffiliated.

 1,033,080,000 Hindus (15%)

 , the overwhelming majority (94%) of which live in India.

 487,540,000 Buddhists (7%)

 , of which half live in China.

 405,120,000 Folk Religionists (6%)

 : faiths that are closely associated with a particular group of people, ethnicity or tribe.

 58,110,000 Other Religions (1%)

 : Baha'i faith, Taoism, Jainism, Shintoism, Sikhism, Tenrikyo, Wicca, Zoroastrianism and many others.

 13,850,000 Jews (0.2%)

 , four-fifths of which live in two countries: United States (41%) and Israel (41%).

<h2>
    How many people have ever lived on earth?
</h2>
<div align="right">
    <a class="morelink" href="#">
        back to top ↑
    </a>
</div>
    It was written during the 1970s that 75% of the people who had ever been born were alive at that moment. This was false.
    <p align="left">
        Assuming that we start counting from about 50,000 B.C., the time when modern Homo sapiens appeared on the earth (and not from 700,000 B.C. when the ancestors of Homo sapiens appeared, or several million years ago when hominids were present), taking into account that all population data are a rough estimate, and assuming a constant growth rate applied to each

```

period up to modern times,
[it has been estimated](http://www.prb.org/Articles/2002/HowManyPeopleHaveEverLivedonEarth.aspx)
 that a total of approximately
106 billion people
 have been born since the dawn of the human species, making the population currently alive roughly 6% of all people who have ever lived on planet Earth.

Others have estimated the number of human beings who have ever lived to be anywhere from 45 billion to 125 billion, with most estimates falling into the range of
90 to 110 billion
 humans.

 <h2>
 World Population clock: sources and methodology
 </h2>
 <div align="right">

 back to top ↑

 </div>
 <p align="left">
 The world population counter displayed on Worldometer takes into consideration data from two major sources: the

 United Nations

 and the

 U.S. Census Bureau

 .
 </p>

 <li id="ref-1">
 The

 United Nations Population Division

 of the Department of Economic and Social Affairs every two years calculates, updates, and publishes estimates of total population in its

 World Population Prospects

 series. These population estimates and projections provide the standard and consistent set of population figures that are used throughout

the United Nations system.

The

World Population Prospect: the 2022 Revision

provides the most recent data available (released in July of 2022). Estimates and projected world population and country specific populations are given from 1950 through 2100 and are released every two years. Worldometer, as it is common practice, utilizes the

medium fertility

estimates.

Data underlying the population estimates are national and sub national census data and data on births, deaths, and migrants available from national sources and publications, as well as from questionnaires. For all countries, census and registration data are evaluated and, if necessary, adjusted for incompleteness by the Population Division as part of its preparations of the official United Nations population estimates and projections.

The

International Programs Center

at the U.S. Census Bureau, Population Division also develops estimates and projections based on analysis of available data (based on census, survey, and administrative information) on population, fertility, mortality, and migration for each country or area of the world. According to the U.S. Census Bureau, world population reached 7 billion on March 12, 2012.

.

For most countries adjustment of the data is necessary to correct for errors, omissions, and inconsistencies in the data. Finally, since most recent data for a single country is often two years old on average, the

current world population figure is necessarily a projection of past data based on assumed trends

. As new data become available, assumptions and data are reevaluated and past conclusions and current figures may be modified.

For information about how these estimates and projections are made by the U.S. Census Bureau, see the

Population Estimates and Projections Methodology

.

```

        </li>
    </ol>
    <a name="accuracy">
    </a>
    <h2>
    Why Worldometer's Population Clock is the most accurate
    </h2>
    <div align="right">
        <a class="morelink" href="#">
            back to top ↑
        </a>
    </div>
    <p align="left">
        The above world population clock is based on the latest estimates
        released in July of 2022 by the United Nations. It will show the same numbe
        er wherever you are in the world and whatever time you set on your PC.
    </p>
    <p align="left">
        Visitors around the world visiting a PC clock based counter, inst
        ead, will see different numbers depending on where they are located. This
        is the case with other world population clocks - such as the one hosted on
        a United Nations website, reaching 8 billion in 24 different instances (on
        e per hour) on November 15, 2022, when each local time zone reached 12:10:
        08. Similarly, in 2011, the clocks on a UN website and on National Geograp
        hic - showed 7 billion whenever the visitor's locally set PC clocks reache
        d 4:21:10 AM on October 31, 2011.
    </p>
    <p align="left">
        Obviously, the UN data is based on estimates and can't be 100% ac
        curate, so in all honesty nobody can possibly say with any degree of certa
        inty on which day world population reached 7 billion (or any other exact n
        umber), let alone at what time. But once an estimate is made (based on the
        best data and analysis available), the world population clock should be sh
        owing the same number at any given time anywhere around the world.

Extracción de los datos de la siguiente tabla HTML en un DataFrame usando BeautifulSoup y read_html

World Population Forecast (2025-2050)

Usando los mismos objetos `url`, `datos`, `soup` y `tablas` que en la última sección, puedo usar la función `read_html` para crear un DataFrame.

La tabla que necesitamos se encuentra en `tablas[cantidad_tablas]`

Ahora puedo usar la función `pandas.read_html` y darle la versión de cadena de la tabla, así como el `flavor` que es el motor de análisis `bs4`.

```
In [11]: indice_tabla = 1
        tabla_html = str(tablas[indice_tabla])

        tabla_io = StringIO(tabla_html)
```

La función `read_html` siempre devuelve una lista de DataFrames, por lo que debemos elegir el que queremos de la lista.

```
In [12]: datos_poblacion_read_html = pd.read_html(tabla_io, flavor='bs4')[0] # Aqu
        datos_poblacion_read_html
```

```
Out[12]:
```

	Year (July 1)	Population	Yearly % Change	Yearly Change	Median Age	Fertility Rate	Density (P/Km²)
0	2025	8191988453	0.88 %	70207115	31	2.30	55
1	2030	8546141327	0.85 %	70830575	32	2.27	57
2	2035	8879397401	0.77 %	66651215	33	2.23	60
3	2040	9188250492	0.69 %	61770618	34	2.21	62
4	2045	9467543575	0.60 %	55858617	35	2.18	64
5	2050	9709491761	0.51 %	48389637	36	2.15	65

• Extraigo los datos de las tablas HTML en un DataFrame usando `read_html`

También podemos utilizar la función `read_html` para obtener directamente DataFrames desde una `url`.

```
In [13]: lista_de_dataframes = pd.read_html(url, flavor='bs4')
```

```
In [14]: len(lista_de_dataframes)
```

```
Out[14]: 5
```

Finalmente puedo seleccionar el DataFrame que necesito de la lista.

```
In [15]: lista_de_dataframes[1] # Indice en la lista de dataframes, segunda tabla
```

Out[15]:

	Year (July 1)	Population	Yearly % Change	Yearly Change	Median Age	Fertility Rate	Density (P/Km²)
0	2025	8191988453	0.88 %	70207115	31	2.30	55
1	2030	8546141327	0.85 %	70830575	32	2.27	57
2	2035	8879397401	0.77 %	66651215	33	2.23	60
