Web Scraping with Python - HTML Color Codes

Scrape: HTML COLOR CODES

- Necessary packages and libraries:

```
In [1]: from bs4 import BeautifulSoup
import requests
import pandas as pd
from IPython.display import display, HTML

# Disable warnings
import warnings
warnings.filterwarnings('ignore')

print('All packages imported!')
```

All packages imported!

- Beautiful Soup:

Beautiful Soup is a Python library for extracting data from HTML and XML files. We will focus on HTML files. This is achieved by representing the HTML as a set of objects with methods used to parse the HTML. We can navigate the HTML as a tree and/or filter what we are looking for.

- Download the content of the website

```
In [2]: url = "https://htmlcolorcodes.com/color-names/"
```

- Get the content of the web page in text format and store it in the variable: data

```
In [3]: data = requests.get(url).text
```

- Create a soup object using the BeautifulSoup class

```
In [4]: soup = BeautifulSoup(data, "html.parser")
```

```
In [5]: print(soup.prettify())
```

<h2>How to use HTML color names</h2>
<p>Just like Hex color codes, HTML color names can be used with inline HTML
styles or in a separate CSS stylesheet.
